SUMMARY

Software Engineer with solid experience in C++ and C#, with expertise in Unreal Engine and Unity. Strong background in game development, spanning physics engine design, build optimization, cross-platform deployment, and the creation of data-driven products informed by analytics and A/B testing.

EDUCATION

Master's degree - Aeronautical Engineering | Aircraft & Spacecraft intensification | **ETSI**
06/2008 – 07/2016, Seville, Spain

WORK EXPERIENCE

Software Engineer | C++, C# | Unreal Engine & Unity | **Iction Games**
05/2023 – 02/2026, Almeria, España

- Sole software engineer on the project, working alongside a 2D artist and a game designer, and owning all Unity development end to end.
- Executed debugging, profiling, and optimization strategies to ensure build stability.
- Configured and prepared builds and release pipelines across platforms and stores.

Software Engineer | C#, Python | Unity | **Axes In Motion**
05/2021 – 03/2023, Seville, Spain

- Championed the design, enhancement, and maintenance of the car physics engine to ensure realistic and stable vehicle behavior across diverse gameplay scenarios.
- Revamped the physics engine to enhance handling feel, consistency, and scalability across various vehicle types and configurations.
- Leveraged Python and BigQuery to develop data-driven products and conduct A/B testing for games with more than 3 million daily active users.

Simulation Engineer | C++, C# | Unity & Aircraft Embedded Systems | **Atexis**
07/2017 – 10/2019, Seville, Spain

- Developed an interactive 3D training experience for pilots and aircraft maintenance personnel.
- Regularly engaged with the A330 MRTT and C295 full-flight simulators to execute operational procedures and simulate malfunction scenarios.
- Translated authentic cockpit procedures from embedded systems into interactive training flows, providing step-by-step guidance for user actions.

SKILLS

C#, C++, Matlab, Python, Unity, Simulink, Unreal Engine, Scrum, Shader, Git, Jira, Confluence
